The reason Peterbilt uses a relay is because Peter uses the "Power to energise" fan strategy. Which means it should take power to energise the fan solenoid. However, Cat's fan strategy is "Power out is fan off".

peterbilt..Cat engine..My engine fan runs continuously ...

Peterbilt's fan strategy takes 12 volts to the solenoid to turn the fan on. So Pete installs a normally closed relay to the fan control valve. This way when the ECM send out power, it opens the relay. The relay is normally located on the fire wall of the truck.

The cooling fan relay is the relay that controls the engine's cooling fans. When the correct parameters are met, a temperature switch or the computer will activate the relay, which will allow power to the fans. The relay will usually be activated once it is detected that the vehicle's temperature approaches excessively high temperatures.
